

# **Let's bind a hardcover book!**

Gina Häußge // [foosel.net](http://foosel.net)

Do you have a PDF that you'd love to turn into a book?

Why not bind it yourself?

It's fun, trust me!

Bookbinder

# Bookbinder JS

A Javascript-based app for formatting PDFs for bookbinding-- a process called imposition. For more information, feature requests, or to contribute, view the project's [Github repository](#). If you have issues with this version, you can try the [old version](#) instead, which only supports folio layouts.

CURRENT VERSION: 1.6.1

## File Info

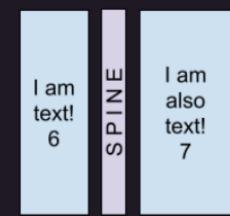

Input File: [Browse...](#) No file selected.

While some PDF viewers display the first two pages as a spread, be aware the first page, which is odd, will be on the right when printed. The first printed spread are pages 2 & 3 of your PDF document. Evens always on the left, odds always on the right.

Generated Files: Both aggregated & per signature files ▾

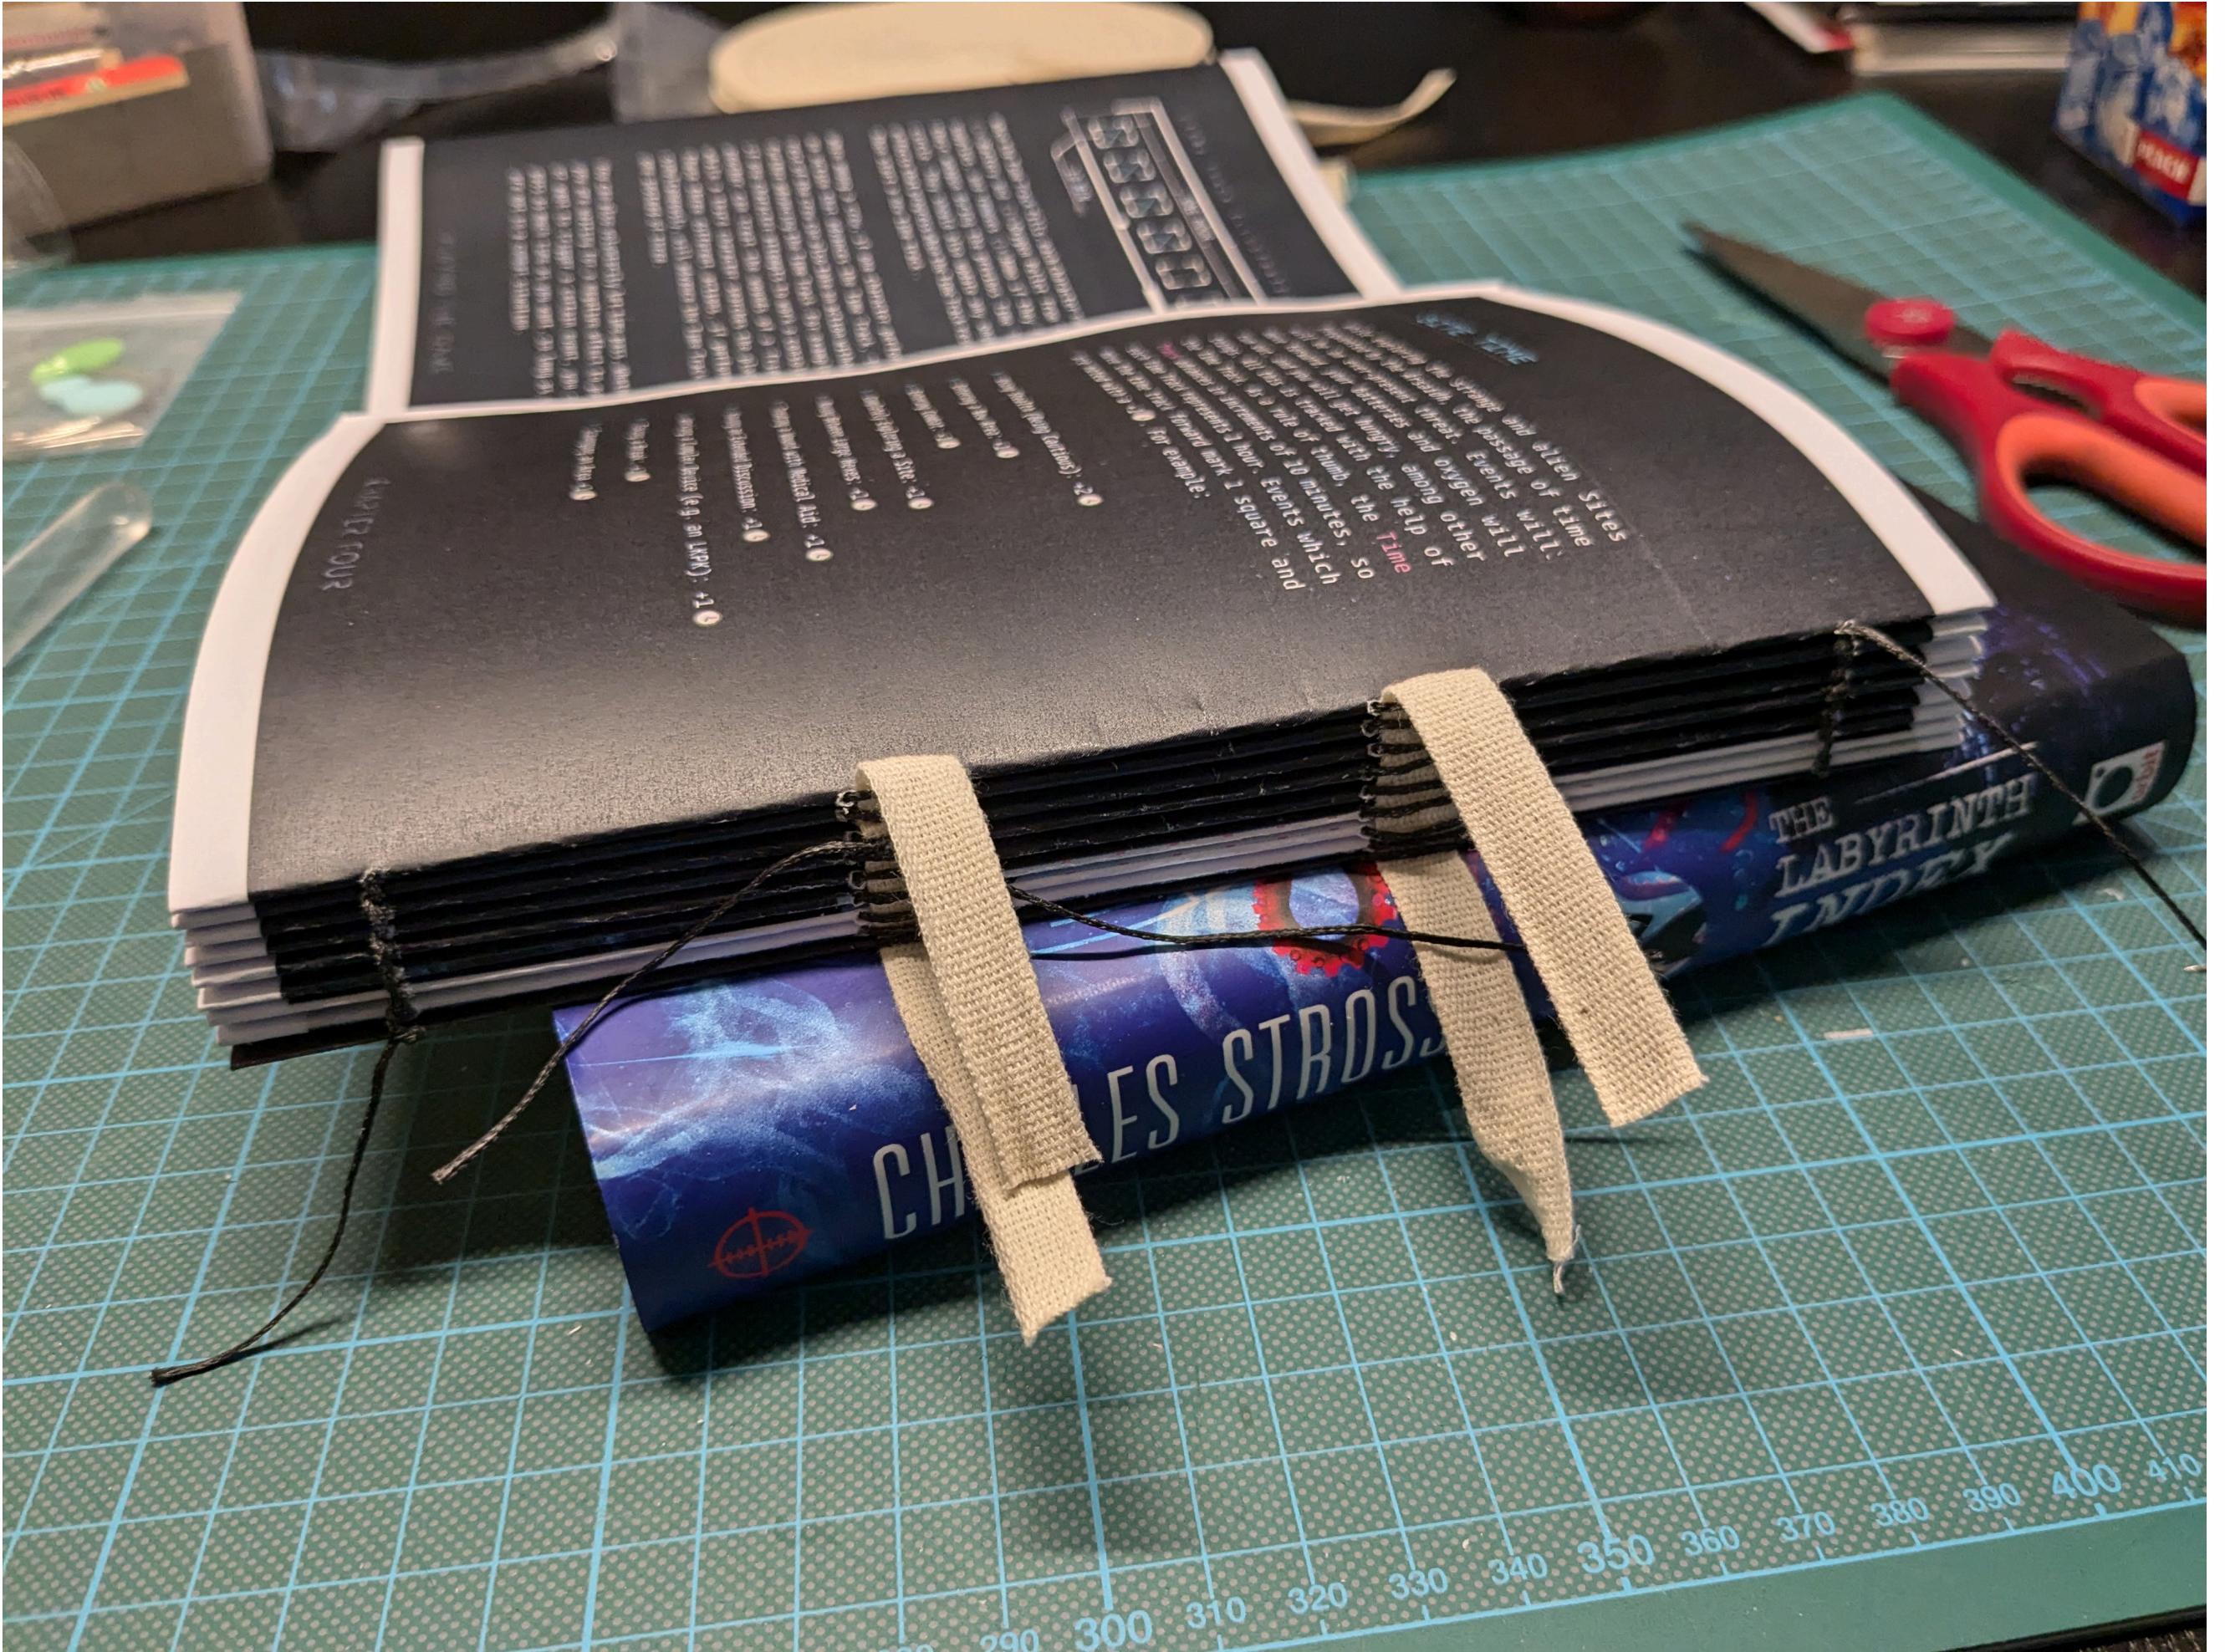

## Source Manipulation

Style: no modification ▾

For books that read like a standard novel  
no rotation of pages applied
